# Video Game Sales

Specification link:

Specification idea:

The app works with data set with information about games (name, year, genre, global sales etc.), it shows the whole table can filter, sort it. There is an opportunity to add new rows and delete ones. Also you can find special information about each game.
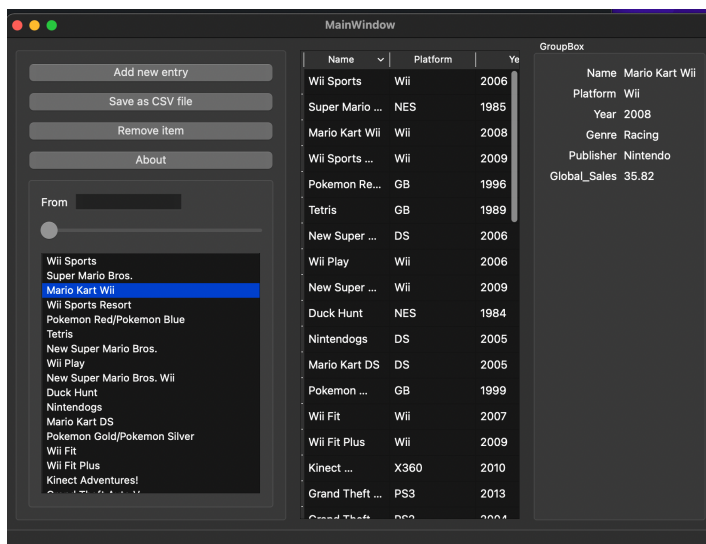

Main Page:

In the main window you can see all the actions that are allowed, all the variables. To add your dataset you should look upper:

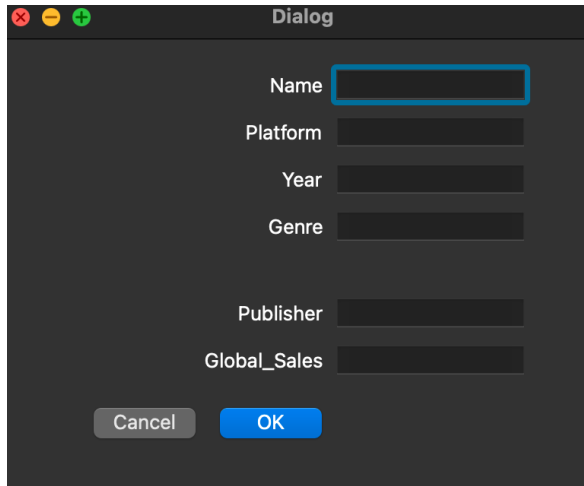

Here you can open your CSV file with the data about games. The next photo shows what you will see after that
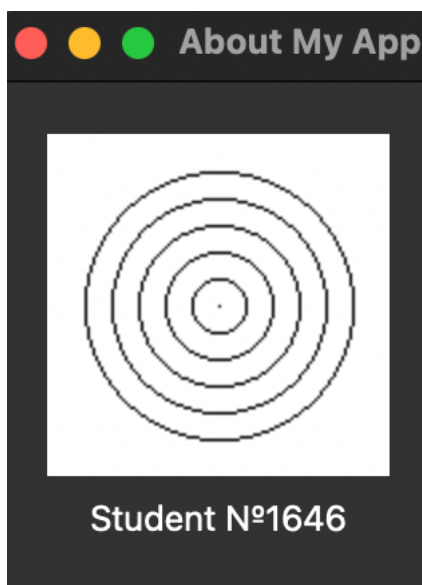

On the right side of the window you can notice all the statistics about specific game. The central part shows the whole table with sorts. On the left you can see the set of all the names of games, upper you can see the limit, and all the functions are above.

You can add a new row or remove it:

After that you can save your file in CSV format. If you need some info press the button 'About'

Result:
The specification was implicated with some slight differences.

Conclusion:

The project works fine however needs some improvements. For example better design or more limits.
